

staff protection register

incheckprotector is a corporate PV person and hazard warning system, designed with public sector organisations in mind.

staff safety

incheckprotector provides the tools to ensure that all staff are able to conduct visits safely.

- Person / Hazard Register
- Corporate safety
- Dangerous address database
- Incident recording
- Corporate-level data sharing
- Documents and images
- Fast searching
- Remote verification and lookup

incheckprotector meets the needs of any staff who are face-to-face with customers and potentially dangerous situations. All this is available in a single, integrated solution.

intelligence

incheckprotector contains a powerful subject database, which enables unlimited people, addresses and associated entities to be linked.

Visiting staff can check the database in a number of easy ways before conducting a visit to validate whether known people are registered at an address.

information sharing

incheckprotector allows information to be shared across the whole organisation and across authorised external agencies. This ensures that visiting staff receive the latest warning information, regardless of the department that reported it.

data protection

incheckprotector is fully compliant with The Data Protection Act 1998. The built-in review module ensures that information is reviewed and re-assessed regularly to maintain relevancy and accuracy. Data is then maintained and used effectively.

system security

incheckprotector includes powerful security measures to ensure that only authorised access to sensitive information is permitted.

- Detailed audit trail
- Individual and group privileges
- Subject access requests
- DPA reviews

designed for:

- Corporate Safety Teams
- Social Workers / Fraud Officers
- Environmental Health
- Housing Officers
- Health Care Professionals
- Human Resources

corporate usage

incheckprotector includes a number of powerful tools to assist in the busy schedule of mobile personnel.

web interface

A customised page on your own intranet or internet site provides a quick and easy searching tool for all designated users to check people, locations and addresses prior to meeting.

email alerts

Visiting staff and remote workers can use a powerful email-based system to check the database without the need for full access to the system. Simply email a user specified account to read results.

bulk checking

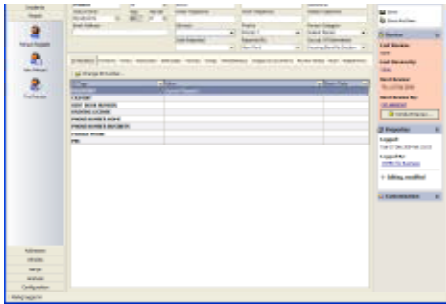

The system enables checks on people and addresses to be conducted in a simple wizard-style, allowing multiple records to be checked in one action.

easy-to-use

incheckprotector has a simple and familiar user-interface, designed to reduce training costs and improve productivity.

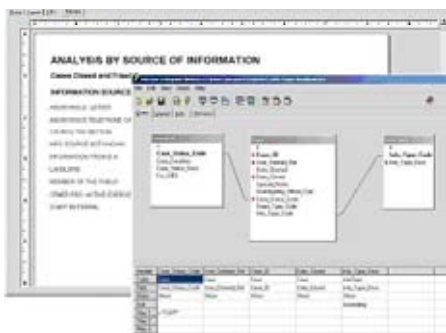

Links within the system are established graphically enabling users to visualise the relationships between people, addresses, organisations and vehicles.

management information

Advanced reporting features allow for information to be output and analysed to identify trends and patterns.

key features & benefits

Feature	Benefit
Person database with detailed information, notes and links	Comprehensive potentially violent person database ensures that all details pertaining to a person can be recorded at a central point, making it easier to share information across departments.
Dangerous address database with detailed information, notes and links	Comprehensive address database ensures that visiting staff are able to check addresses for potential hazards (dangerous animals, hazardous environment, etc.) before planning visits.
Automatic review management informs managers and clerks when reviews are due	Records in the database should be reviewed regularly to ensure that data is kept relevant and consistent, in accordance with the Data Protection Act 1998.
Intelligence system links between objects in the database	Enables teams to build up a rich intelligence database of linked or related items. For example, associate vehicles with violent people or link a dangerous dog to a specific address.
Log notes and events against an object	Enables visiting staff to make and review documentation relating to the subject. Notes are automatically date and time stamped to ensure that they are reviewed in accordance with age and relevance.
Web and email interface	A built in page on your own company intranet ensures that all visiting staff can gain access and quickly query the database without having access to core information. Use the web pages or email the system direct.
Advanced object searching	Enables visiting staff and administrators to quickly assess the hazards associated with visiting a specific address or violent person by searching rapidly through the intelligence database.
Comprehensive security features, such as passwords, privileges, audit and subject access requests	Ensures that the data held in the system is available only to fully authorised users. All access and actions conducted by staff are recorded in the searchable audit.
Bulk search facility	Enables visiting staff and administrators to search for addresses or people quickly, allowing a large number of visits to be planned effectively.
Compliant with Data Protection Act and other relevant legislation	The system complies with DPA and FOI acts, ensuring that information is captured, recorded and presented in the correct manner.
Configurable drop-down fields and warning levels	InCheck can be configured to suit the requirements of the organisation. Hazard levels, review periods and other fields can be easily tailored.
